

1670.

Apollo Anglicanus

THE ENGLISH APOLLO:

Assisting all Persons in the right understanding of this Years Revolution,
as also of things past, present,
and to come.

With necessary *Tables* plain and useful.

A twofold Kalendar, viz. *Julian* or *English*,
Gregorian or *Foreign* Computations, more plain and
full than any other; with the Sun and Moons
Risings, and Settings, daily observ'd.

Being the second after Bissextile or Leap-year.

With a useful Continuation of

GESTA BRITANNORUM,

From 1665. to this present Year.

By RICHARD SAUNDERS

Student in Astrology and Physick.

Cognosce alia, ut te cognoscas; cognosce teipsum, ut cognoscas Deum.

LONDON, Printed by E.C. & A.C. for the
Company of Stationers. M. DC. LXX.

A Table shewing how many years Purchase a Lease or Annuity, to endure for any Term of years under 33. is worth presently at Interest upon Interest, at six in the hundred: and shewing plainly how to discount any Lease in Being, and the true value of the Reversion after any number of Years.

The use and Explanation of this Table.				The first Column towards the left hand, sheweth the years of a Lease or Annuity, and right against each Year, is the Years Months and Decimal parts of a Months purchase, that such a Lease or Annuity is worth.			
Years of a Lease.	Years.	Months	dec. par	<i>Example.</i> Suppose a Lease or Annuity to continue ten Yeares, and you would know how many years purchase it is worth in present money, look in the Table for ten years of a Lease to the left hand, and against the same you shall find 7,4,3 which shew- eth such a Lease to be worth se- ven years four months, and three tenth Parts of a Months pur- chase.			
1	0	11	0				
2	1	9	9				
3	2	8	1				
4	3	5	9				
5	4	2	5

14	9	3	6				
15	9	8	5				
16	10	1	3				

Again, are you to take or buy the Reversion of any Lease or Annuity, work thus, Suppose the Lease to be thirty years in all; you find in the second Table, and right hand against thirty, 13 years 9. months, and two tenth Parts of a months purchase; this it were worth, were it in present possession. But suppose there be a Lease of five years (more or less) before your Commence; look in the Table against the five Years, and there you find four Years, two Moneths, five tenth parts, halfe a Moneths purchase; take this out of the sum against thirty, which is 13,9,2. 4,2,5. The remainder is 9. years six moneths, seven tenth parts of a month; and so much is the Reversion after five years worth, the remainder of thirty years. This is usefull and very easie.

A plain and easie Table, shewing the true Interest due upon any Summe of Mony from five shillings to an hundred pounds for a Year, or under, after the rate of six pounds in the hundred.

Q. Elizab.	1533	1558, No. 17	44 4	68, March 24	Westminster

The Union of the two Kingdoms.

James	1566	1602, Ma. 24	22 0	45, March 27	Westminster
Charles 1	1607	1625, Ma. 27	23 11	22, Janu. 30	Winfor
Charles 2	1630	1648, Jan. 30	when God grant long	1 Reign	

Now Peace and Plenty (in our Bowels) reigns,

And none but Enemies are heard complain;

I ask our Anti-Monarchists, How they

Could more oblige us if they had the sway?

For let them fancy what they please, new things,

No Freedom's like to that proceed from KING'S.

Directions for the subsequent Diary, or Almanack.

1. **I**N the first column to the left hand, on the left hand page you have the Numeral figures of the days of the Month.
2. In the second column you have the week days, and Dominical Letter.
3. You have all the principal and observable Saints days and feasts; the places of the Planets, and the Moon most nights, with what fixed Stars she is with, is observed; by which the Asterisms and constellations are easily known to an ingenious eye and understanding.
4. The Moons place in the Zodiac every day at noon.
5. The age of the Moon, by which the Tides are known.
6. The rising or setting of the Moon, every day in the year.
7. The general State of the weather, with much care performed by the Author.
8. In the 8. column, the first on the right hand, you have the English account. In the 9. the Forain. In the 10. the Roman week days, and Sunday Letter.
11. The perfect Roman Kalender and Saints days.
- 12, 13, and 14, the utmost to the right hand, you have the dayly rising and setting of the Sun, with the Aspects.

A Table to find when the Moon will be full South every day this year, whereby the time of Tides is exactly known.

M. A. H. b. f. First find her age in the 5. column of the Almanack, which is exactly every day noted; which age seek out in one of the two columns of this Table to the left hand, against which in the third and fourth columns is the hour and minutes which shew the time of the Moons being South.

As for Example, the 30 day of March the Moon is 19 days old, which being found in a column of this Table against 4, to the right hand it points to h. 12 m. at which time the Moon is South the said 30 day of March, 1669. *Et sic de cæteris.*

Here note, that all the increase she cometh to the South in the evening following the Sun; but in the decrease, in the morning going before the Sun.

By any Sun-diall you may know the hour of night by adding to the time of the Moon being South after, or subtracting before.

To find the time of high water in most Coasts of England.

First, as you before were taught, find at what time the Moon will be South, for then you may truly conclude it High-water at Southampton, Quindborough, and Portsmouth, for there the South and North Moons make a High-water. But when you desire the time of Full Sea in any of the following Coasts in the ensuing Table, find the name of the place, and see how many hours and minutes be annexed therunto in the column under H.M. which added to the time of the Moons coming to South, gives you the time of High-water for the place required.

A Tide-Table, with the Names of the Havens.

R ochester, Maldon, Aberdeen,	0 45

Milford, Bridgewater, North-coast,	7 30
Portland, Peterport, Hartflew,	8 15
Dover, Yarmouth, Harwich, Dublin,	10 30
Callice, Rye, Winchelsey, Calshot.	11 15

Example.

THE 30 of March this year, it is required to know the time of full Sea at New-castle: by the Kalendar over against the 30 of March, in the fifth Column, I find the Moon nineteen days old, and by the foregoing Southing-Table, I find the Moon South at 3 hours 12 minutes in the morning; then in the preceding Table, against New-castle I find 5 hours 15 minutes, which added to 3 hours 12 minutes, the aggregate is 8 hours 27 minutes, wherefore I conclude it High-water there at 8 hours 27 minutes in the morning: so of any other.

Take notice that the Tide floweth one point of the Compass more at the Spring-Tide (which is the New and Full Moons) than at the Neap-Tides (the first and second Quarters) as also the latitude of the Moon, and Winds, may alter it an hour sooner or later; let it be their providence who depend upon the Tides, to make timely provision.

*The Tides like venious Humors never rest,
Still constant in unconquancy at best.*

A true Chronology of memorable things in this year, 1670.

B ute entred this Island of Great Britain	2796

June 1670.

last part of this month when the sky is clear you may to your wonder behold a most glorious comet appearing as a Star, about noon in the 9th. House of Heaven, west of the Sun, bespeaking the splendor, worth and dignity of our English Church and Clergy, and denoting judgements and evil success to all her and their enemies. Phosphor us oritur ante solem, si clari dies fuerint, visetur in cardiu, quia appropinquat terris, & grandescit.

SAUNDERS,

1670.

Of Eclipses this present Year 1670.

THere will be Four Eclipses of the Luminaries this Year, two of the *Sun*, and as many of the *Moon*, onely the last of the *Moon* will be seen in our *Horison*.

The first will be a partile *Eclipse* of the *Moon* upon the 25 day of *March*, about eleven of the Clock in the Forenoon, which will be chiefly visible to our *Anipodes*, the Gulf of *Mexico*, and the *Peruvian Ocean*.

The second is likewise a partile *Eclipse* of the *Sun* upon the ninth day of *April*, near the time of his setting, which will present it self to the North-west parts of the World, as *Nova Britania*, and *Essoitland*.

The Third is a partile *Eclipse* of the *Moon* upon Sunday night the 18 of *September*, and will be visible at *London*, and all *England* over, if the Sky be clear.

The begining will be on Munday morning, at one a clock, 17 min. 58 seconds.

The true opposition at --- 2 Hor 40 0

The middle time of opposition - 2 Hor 44 48

The end at --- 4 11 28

Total Duration will be --- 2 53 40

Digits, or Parts Eclipsed, are --- 9 Di. 33 min.

The Fourth and last *Eclipse* is of the *Sun* upon the third day of *October*, which will be but small, and visible onely to the remote southern parts of the Earth unknown to us.

I shall a little briefly take notice of this third *Eclipse* of the *Moon*, as it principally concernes *England*, *France*, *Denmark*, *Suevia*, *Germany*, and many other places, which places according to the Nature of Effects will be more or less sensible thereof.

First, we observe this *Eclipse* begins in the 9th House of Heaven, which hath significations of Church and Cler-

A Prognostication.

gy Affairs, Church-Livings, Benefices, Advowsons, all sorts Professing Religion, as also Lawyers, Lawes, and Constitutions, and ends in the 8th House, which signifies Death, its Quality and Nature, Wills and Testaments of Men deceased, Legacies, Wives Portions, Fear and Anguish of minds, &c.

And, according to the Ancients, *Regionibus & Civitatibus, Quarum significationes sunt illius signi, multae Aegritudines & Mors, &c.* Many evil distempers with us in open Countreys as well as Cities, Mutable and Lofly Minds, and Hasty Death to many Eminent Persons both in Church and State (in those Countreys signified hereby) in their prime Age and full strength.

And, as it ends in the 8th House, *Significationes sunt multae infirmitates, & mors*; All persons of Eminency, both antient and in full strength may be taken out of this life, Increase of various Sects and different Opinions.

Moreover, it's very observable, that *Mars*, disposer of the Eclipse is in a hostile square to both the Luminaries, and strong in his Exaltation, lendeth a help hereby to the *Turks* ensuing downfall, and other Metropolitan Enemies to the true Religion. *Namque crit in animalibus Damnum magnum. Item Animantes, sive bestias, quae necessariae sunt ad vitam Humanam usum*; either a Rot of Sheep; or other Malignant distemper amongst Domestique Cattel.

The Benevolent Planet *Jupiter* hath power and Government also in this Eclipse; *Et Gubernatores, Gloria, Magnanimitate Magnificencia Ornat*, Prognosticates, Stability, Glory and Splendor to Church and State, against which whoever lifts up his Imaginations cannot prosper, and his Friendly time to the place Eclipsed, and his Position in a Regal Sign, Intimates, *Magnanimity* and *Love* in Superiours, in Church and State, and *Love, Cheerfulness* and *Obedience* amongst Inferiours, *Quod faxit Deus.*

Of the Four Quarters of the Year,

And first of the Spring.

VHigh Quarter begins, when the Sun toucheth the first Point of the Aequinoctial Sign *Aries*, which this Year is on *Thursday* the 10 day of *March*, almost

most 3 Min. after 5 a Clock in the morning, making Day and Night equal all the World over, except within the Polar-Circles.

Briefly, by way of Astrological Determination, considering the Pre-ventional Full Moon, and the Post-ventional New Moon, with the present ingrels of the Sun into Aries, we find *Mars* more strong by far then any other Planet, and so consequently (the Ascendant being considered) Lord of the Year, to whom *Mercury* is next in Power, then *Jupiter*; *Saturn* and *Venus* are considerable also, by reason of their Position.

Mars in general, as to the constitution of the Weather, gives Stormes, and sturdy Tempests, a Dry Suffocating Air in Summer, Pray God it bring not the Sweating-Sickness, of the Terror of which you may Read in the following Pages.

But *Jupiter* is more benignly inclin'd in the fifth House saith mine Author, *Liberis bonam valetudinem, & pragnantibus felices partus designat*; Health to young Children, safe and easie delivery to Women with childe.

The Position of *Venus* (also) in the second *Humiditatem Auger*, which will make the Spring more seasonable & *fertilitatem & uberem proventum frugum, Item affluentiam & liberalem vitam*; Plenty, Riches, and Peace, to our Common-People and Country.

Of Summer.

THis Quarter begins on Saturday the 11th of June; three Quarters past 7 a Clock in the morning, causing longest dayes and shortest nights to all on this side the Equator.

The Temperament of this Quarter depends principally upon *Mercury*, who, according to *Pitatus*, *Leopoldus*, and *Albunazar*, *Qualitatem Aeris variat, ventos maxime Corruptit &c.* He is the cause of much Wind, and unwholesome Air.

Mars is also strong from his Position in the 6th House, *Calidas & siccas infirmitates serit*, and being in Opposition to the Sun, he afflicts the head and brain, causing the

A Prognostication.

Cardiack passion, swooning, and sudden Trembling of the Heart: And, as to the Weather, *Calorem immensum, fulgura, tonitrua, ventos cum impetu significat.*

The Sun is dignified also, and signifies *Florentem & laetum statum plebi sub Magistratu, & Dona Regum pollicetur*, Happiness to Prince and People, with which I conclude this Quarter.

Of Autumn.

VV Hich takes beginning this Year on *Munday* the 12 of *September* near Eleven at Night, the Sun then entring the first scruple of *Libra*, ballancing again with us, unstanding time; the never-resting Sun, summoning us to prepare for Winter blatts, by his departure from us to the Southern Solstice.

The Grand Superiors are very weak, *Mercury* obtaining most strength and dignities this Quarter, which will cause a Windy blustering Season, especially Western Winds much, and often disquieting the Seas.

Of Winter.

VV Hich takes beginning this Year on *Sunday* the 11th of *December*, 3 quarters past 10 in the Forenoon, the Sun then touching the first scruple of *Capricorne*, forming *shortest* Dayes and *Longest* Nights to all on this side the Equator.

Mars in this Quarter obtains most Dignities, and hath most power in the Gubernation thereof, from whence the chief signification of things is to be taken, yet *Saturne*, *Jupiter* and *Venus* are also considerable in many prevalent Dignities, all which (in brief) amount to this, A *Mutable* Season, of *Frosts*, *Cold*, and *Slabby* Thaws, by reason of which uncertainty it will be *Sickly*, and replete the Body with *Vicious* and *Ill* Humors, for which, timely, *Purge* in the *Spring* following.

A Celestial Cronology for many hundred of Years past, wherein may be seen under what Position of Heaven those Grand Accidents in the World have hapned; And may happily tend to Informe our Prognostiques for the time to come.

And First of Fires.

IN King Etheldreds Time, in the Year of Grace 982 most part of London was burnt, h was then in II, the City Ascendent, and 4 in m, Mars in s near Corleonis.

In the Year 1087, July 7th, Pauls Church and most part of London burnt, h then in the begining of v, 4 in the begining of f, s in m Retrog

1213, London-Bridge, and St. Maryoveries wholly burnt, h then in II, the degree of the City Radix, 4 then in II, R. s in m.

1632, Feb. 11, London-Bridge Fired.

1654, Feb. 12. A Fire in Fleetstreet, and July 20, in the same Year, a Ship blown up near London-Bridge did much hurt, kill'd some, and hurt many on Southwark-side, greatly indanger'd the Bridge. The morrow after, being the 21, a lesser Ship blew up near Lyon-Key did much harme.

1649, Begining of January, many houses Fired and blown up by Gunpowder near Tower-hill.

1655; Octob. 11. A Fire near Holborne-bridge.

1656, April 12. A Fire at Broken-Wharf at 12 at night.

1558, Nov. 20 22 and 26 Fires in Fleetstreet; And the same Year, Sept. 2. a great Fire near the Dutch-Church.

1623, Octob. 26, the Downfall in Black-Friers.

1628, In Sept. a great Fire near Richmond-house in the Savoy.

1666, Sept. 2, 3, 4. That Dreadful Fire in London, of these later years every one may find the Position of the Planets in every Ephemeris; but, its worth our consideration even to wonder, to observe in every one of these Disasters, how strangely and significantly the Celestial Bodies did as-

A Prognostication.

pect, and affect the City Radix, which being considered, the like Evils may be foreseen, and predicted for the time to come, the great *Conjunctions* and *Comets* motion being heeded.
(Thus much of *Fires*.)

Of Plagues and Epidemical Diseases.

IN the Year of our Lord 1389, in King Richard the Second's time, a great Mortality by Plague; It began in April, the Youth and Lustiest people died, h was then in the latter part of II , at the beginning thereof V in ∞ in P to h , J in II in G h and P V .

1474, In Edward the Fourth his time, so great a Pestilence for four Moneths, that Writers of that Age say, 15 years War before consumed not the third part of people that then dyed, h then in the latter part of ∞ : V in II J in Ω with Corleonis.

A great Mortality in City and Country for 14 Moneths, it began in September 1479, and continued till Nov. 1480. h then in Ω V in II J in Ω in G of h & transited Corleonis, 1501, In the Fifteenth year of Henry the Seventh, a great Plague in London, and all the Kingdome over, h in V , V newly separate from h and in ∞ , J in II , the City Radix.

1543, A Pestilence Reigned in London, h in latter end of ∞ , and beginning of m , V in the latter end of Ω , and beginning of m , J in Ω with Corleonis.

1562, A Great Plague at Newhaven and London, h in ∞ , V in II and ∞ , J in II ∞ and Ω .

1569, A Pestilence over England and London, h in ∞ V in V , J in Ω .

1625, First Year of Charles the First a great Plague, h then in Ω and m , V in m and ∞ , J in X and V , but R . in X .

1665, The last greatest, and most Dreadful Sicknes h was in V , V in ∞ , J in II ∞ and Ω .

The most dreadful of all Epidemical Distempers was the Sweating Sicknes, but 3 times known in England, but is to be feared in future time, for which reason I will record them with the Remedies.

In the First year of Henry the Seventh, from Sept. 21 to the

I re
the

Lastly, in the year 1551, in *Edward the Sixth* his time, the very 9th day of *July* began the like sad Raging *Sweating-Sickness* as before, but this seized upon Men much more then Women, and chiefly of Men in full Strength, between 20 and 40 years of Age; and its very observable, that this *Sickness* at the same time was in other Countreys, as *Ant-*

A Prognostication.

werp, and other places, and in those Countreys seized none but *English*.

In the *Sweating-Sickness* in *Henry the Eighth* his time, the People were so unhappy, that none minded them of the Remedy (or few were living) used in *Henry the Seventh's* time, which was as before recited, and our *Historians* observe, many might by that means have been saved; for which reason, for the benefit of future Ages, if ever the like occasion should be, I will here Record the Remembrance of this last in their proceed and Cure.

The manner of this *Sweat* was such, That if Men took any Cold outwardly, it struck the Sweat in, and immediately kill'd them; if they were suffer'd to sleep, commonly they *Swooned* in their sleep and departed, or else died immediately upon their *Awaking*; but, the way of Cure was, for their Friends about them to keep them *waking* in a *Moderate Sweat*, and let them have no more Air than onely to *Live*, and take nothing for sustenance but *Posset-Ale*, and that sparingly too, and for necessity, and do this for 30 hours, and then was the danger past, if they took care to prevent Cold afterwards; through carelesness in taking Cold presently after, many had it two or three times one after another.

Before they took this Course infinite Numbers died, after this Course taken it abated every day, and most lived who were thus ordered.

The *First* of these 3 *Sweating-Sicknesses* was 184 years since, the *Second* 151 years since, the *Last* 119 years, all three in the compals of 65 years.

It then entred an Airy signe, ♃ in ♈ Direct, and ♄ in ♏ direct, both in ♈, and both in ♏ to ♈.

I had resolved to enlarge this *Cælestial Micronicon*, but my limitation Commanding Brevity, puts a stop to my farther Proceed this Year, I hope this will be well taken, the next Year, God willing, you shall have Account of all *Tempests*, *Stormes*, *Famines*, *Snows*, *Frosts*, *Earthquakes*, and the like, and the *Phisical Reasons* thereof, which have been this many hundred years past of *Notable Observation*.

SAUNDERS, 1670.

Curteous Readers, I have been much importun'd by persons of great Quality, and Judgement, to continue this Succinct Chronology, or Gesta Britannorum, which I have in the following undertaken from the very time my Honoured Friend Cap. George Wharton Esq; left off the same, and shall (God willing) continue it (whiles it comes through my hands) with new matter every year, for the delight and benefit of all Persons.

1665 |

Nov. 18	D R. John Earls, Lord Bishop of Sarum, departed this Life about 9 at night of his old distemper the Stone, & Feavor.	Dec. begin- ing. Dec. 30	2 or 3 mighty Fires in Constantinople about this time, From the 18 of April 1665 to this day, buried within the Bills of Mortality in and near London of the Plague, besides Quakers, and many that never were brought in, 68748. and in the total that year 912351.
14, 15, 16	Violent Storms with Hail and bad weather in most coasts of England, the like not seen before.		
17	Much Cattel drowned by Storms and Spring-tydes.
